State-of-the-art Cloud Performance Metering Launch with Hypersoft Reporting

Growing world-wide need for the provision of reliable business-oriented cloud performance metric has compelled Hypersoft to develop a special technology for making sure clouds are well-connected, robust and are managed in the most optimal fashion

Munich, Germany May 11, 2010

A decade long history of providing business service management metrics for global service operators has given Hypersoft a powerful back-up and expertise to apply its know-how and state-of-the-art technology to newly emerging and existing cloud environments.

Uniquely positioning itself as the only company that offers metering solutions which reflect on business processes execution from the customer's view, Hypersoft now offers service analysis packages specifically developed to target and optimize cloud environments quality and assess their global performance in a distributed end-to-end manner.

Focusing on metrics gathering discreetness and full automation, Hypersoft's OmniAnalyser™ and OmniContext™ reporting packages non-intrusively collect cloud health data reliably delivering statistics to business professionals and corporate clients. Due to distant service probing capabilities any type of cloud can be measured and analysed irrespective of their type, size, the level of complexity and global dispersion – cloud service performance at Hypersoft Demo Metrics Portal, which is available for viewing in the real-time manner proves the merits of remote service analysis and its usefulness for strategic decision making process.

Hypersoft has now successfully applied and enhanced its transactional monitoring technology to global cloud ecosystems.

Concentrating on business transaction as being the only true and

reliable KPI for cloud service quality estimation and analysis
Hypersoft has expanded its area of expertise to deliver companies and managed service providers operating with public, hybrid and private clouds an all-round picture of business processes that is user-centric, fully traceable and verifiable. Every type metrics mirroring on user interaction with cloud servicing environment, whether it is SaaS, PaaS or IaaS based retains levels of complete accuracy and full aggregation, meaning that all underlying cloud processes can be turned into meaningful business indicators used by customers and IT professionals.

Cloud operators now proactively manage service quality through modeling of actual user actions and monitoring cloud service responsiveness to daily service requests. Useful for a great variety of cloud operating scenarios, this sort of metering provides continuous picture of service quality, enabling spotting and correcting troubled areas of cloud ecosystem before clients have a chance of experiencing significant quality downgrade. As an additional metering example, Hypersoft metrics now collects cloud CPU usage statistics for different corporate clients, automatically aggregating usage data and transforming it for billing purposes, while simultaneously retaining full auditing accuracy.

About Hypersoft:

Hypersoft Information Systems is the only provider of cloud services metrics which concentrates on strategic long-run management of complex cloud installations and their continuous improvement in regards to raising business challenges. Comprehensive service-focused statistics which is directly linked to business transaction and perception of service quality from end-user perspective in end-to-end manner provides a powerful analysis framework for corporate decision makers and other IT professionals to help stay focused on strategic business goals. Automated data gathering, processing and reports
